Are you suffering from an Antibiotic-Resistant Infection

Phage Therapy Can Help You

What is Phage Therapy?

Phage Therapy is a natural, safe and effective treatment for bacterial infections, including antibiotic-resistant infections.

Phages are viruses that are natural predators of bacteria. They attack only their target bacteria, without harming human tissue.

When antibiotic treatments fail, Phage Therapy can be used to treat bacterial infections.

Phage Therapy is an extremely effective treatment for chronic and recurrent infections, with minimal side effects.

Is Phage Therapy For Me?

Yes, if you suffer from any of the conditions given here, or any other chronic or recurrent condition caused by bacterial infection, and repeated courses of antibiotics are not providing a cure, phage therapy could help you.

Conditions Treated with Phage Therapy

Urology & Gynaecology

- Urinary Tract Infections (UTI)
- Kidney and Bladder Infections
- Prostatitis & Epididymitis
- Vaginitis & Bacterial Vaginosis

- Dermatitis

Pediatric Care

- Bacterial Conjunctivitis
- Gastrointestinal Infections
- Ear, Nose & Throat Infections

Surgical & Hospital-Acquired Infections

- Chronic Wounds e.g. Surgical Wounds & Diabetic Foot Ulcers
- Prosthetic-Acquired Infections

Phage Therapy Now Available In India!

Phage Therapy offered by the 98-year-old world-renowned phage research institute, the Eliava Institute in Georgia, is now available in India.

Vitalis Phage Therapy, a first-of-its-kind initiative to create access and awareness of phage therapy in India, has partnered with the Eliava Institute and the Eliava Phage Therapy Center to help patients from India undergo phage testing and treatment for their conditions.

Diagnostic testing and phage sensitivity analysis with Eliava Institute's phage preparations is done at India's top diagnostic lab facility, Dr Dangs Lab.

Local testing and treatment allows patients to take phage therapy quicker and at lower cost as compared to travelling to Georgia for treatment.

Is Phage Therapy Permitted in India?

The World Medical Association's Declaration of Helsinki permits the use of treatments such as phage therapy in individual cases where known treatments like antibiotics have failed. India follows these guidelines and allows use of phage therapy as personal medicine.
