OUR PROMISE FOR QUALITY AND SAFETY :

Quality

- NABL accredited since 2001
- Triple quality check assured
- Each test report viewed by a Dr. Dang
- Highest doctor to patient ratio
- Winner of National Laboratory Excellence Award 2022 (Prof. SK Joshi Award) by Quality Council of India, best Path Lab (National) award by ET Healthcare, & FICCI Healthcare Excellence Award in patient experience.

Safety

- Mandatory guidelines for single use PPE
- Single use, sterile and safe blood collection kits & temperature controlled transportation of samples
- Strict infection control protocols
- Regular screening of staff and vaccination drives
- Safe home collection services available all over Delhi NCR

SMART CHECK PROFILE (SMAC)

This is a basic yet powerful package which gives a bird's eye view of your inner metabolism. It has Complete Blood Count which in itself provides a wealth of information regarding anemia(Hemoglobin), infections(TLC, DLC), blood cancers; lipids; blood sugar evaluation; kidney and liver evaluation; Magnesium - a key mineral, deficiency of which causes fatigue and a muscle marker CPK.

- CBC with ESR
- Blood Glucose Fasting*
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.

Indicative of extent of test coverage.

1 DR. DANGS LAB

Note: - Tests marked with * require minimum 10-12 hours fasting.

INR 3,500

ADVANCED SMART CHECK PROFILE

(Advanced SMAC)

This package couples the advantage of Glycosylated Hemoglobin (HbA1C) which gives you an average estimation of your sugar levels over the past 3 months, as well as the well-established Thyroid Profile with Free T3, Free T4 and Ultra-sensitive TSH while continuing to give you all the benefits of a Smart Check Profile.

- CBC with ESR
- Blood Glucose Fasting*
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Thyroid Profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)

Advanced Smart Check Profile

Indicative of extent of test coverage.

2 DR. DANGS LAB

SUPERIOR SMART CHECK PROFILE (Superior SMAC)

The superior smart check profile adds an assessment of key vitamins such as vitamin D3 and vitamin B12 along with IgE (which gives you an indication of your body's response to allergy), beyond all the value of an Advanced Smart Check. This package encourages you to consider a superior choice in a health check & this package is highly recommended for persons of any age group who are looking for a simplified yet effective evaluation by blood tests.

- CBC with ESR
- Blood Glucose Fasting*
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Thyroid Profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)
- IgE
- Vitamin D3
- Vitamin B12

Indicative of extent of test coverage.

INR 8,600

PREMIUM SMART CHECK PROFILE (Premium SMAC)

Premium smart check profile amplifies the advantages of the superior smart check by including additional tests that provide a greater in-depth analysis of your health. The additional tests include Vitamin B9/ folic acid, a detailed urine analysis, complete iron studies including ferritin, iron binding capacity, and transferrin saturation. The inclusion of High Sensitive CRP is a huge plus with the test being a sensitive marker for evidence of inflammation as well as cardiac risk assessment. This package is highly recommended to persons of any age group who are looking for an extensive and effective evaluation by blood tests.

- CBC with ESR
- Blood Glucose Fasting*
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Thyroid Profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)

VITAMINS & MINERALS PROFILE

Deficiency of Vitamins and Minerals are amongst the commonest reasons for anemias, fatigue, muscle cramps, joint and body pains, tingling sensations and several other indistinct complaints. They play an essential role in strengthening the body's Immune system.

Adequate levels of Vitamin D help to protect against infection. Deficiency of Vitamin D has been known to play a role as a risk factor for several Non Communicable diseases as well. Vitamins and Minerals profile is a perfect add on to a Smart Check, Advanced Smart check or any other monitoring panel.

- Vitamin D3
- Vitamin B12
- Total Calcium
- Phosphorus
- Folic Acid (Vitamin B9)
- Ferritin
- T.I.B.C.
- Transferrin saturation
- Magnesium
- Zinc
- Iron

ADVANCED VITAMINS & MINERALS PROFILE

Deficiency of Vitamins and Minerals are amongst the commonest reasons for anemias, fatigue, muscle cramps, joint and body pains, tingling sensations, frequent infections and several other indistinct complaints. They play an essential role in strengthening the body's immune system. In addition to all the parameters covered in the vitamins & minerals profile this advanced version also comprises of vitamin A (retinol) ie. essential for healthy vision & vitamin E, responsible for optimal skin health & the robust functioning of your immune system. It also includes STFR, an advanced marker to assess iron deficiency and also to guide the physician to gauge the requirement or progress of iron therapy.

- Vitamin D3
- Vitamin B12
- Total Calcium
- Ionized Calcium
- Phosphorus
- Folic Acid (Vitamin B9)
- Ferritin
- T.I.B.C.
- Transferrin saturation
- Magnesium
- Zinc
- Iron
- U.I.B.C.
- Vitamin A
- Vitamin E
- STFR (Soluble Transferrin)
- RBC Folate

Advanced Vitamins & Minerals Profile

FEMALE HORMONE PROFILE

An imbalance in female hormones can lead to irregular periods, bloating, fatigue, irritability, hair loss, palpitations, mood swings, diabetes, lack of ability to concentrate, issues with fertility, hirsutism(excessive hair), premature menarche, etc. This Profile can also be used in various conditions such as amenorrhea, dysfunctional uterine bleeding & to assess ovarian function. Physicians often ask for a Female Hormonal Profile to be performed on Day 2/3 of the menstrual cycle with a pooled and mid morning sample for prolactin.

- FSH
- LH
- Prolactin (Pooled)
- Estrogen
- Progesterone
- AMH
- Thyroid profile with FT3, FT4, Ultra-sensitive TSH

DIABETES / HYPERTENSION PROFILE

Diabetes is understood as a disease where there is excess glucose in the blood and it is hence often assumed that having less sweets can help overcome the illness. However it is critical to keep a lookout for the complications of Diabetes which cause permanent damage. A fair number of patients have both Hypertension as well as Diabetes which doubles the risk of organ damage. This profile puts together tests to monitor Diabetes and Hypertension and their commonly associated complications.

- Blood Glucose Fasting*
- Blood Glucose PP**
- HBA1C (Glycosylated Hemoglobin)
- Urea
- BUN

BASIC HAIRFALL PROFILE

The Basic Hairfall Panel is designed to help identify common underlying causes of hair loss by assessing key health markers. Hairfall can result from a variety of factors, including hormonal imbalances, nutritional deficiencies, and other health issues. This comprehensive package includes essential tests such as the Thyroid profile with FT3, FT4, Ultra-sensitive TSH, CBC with ESR, Vitamins and Minerals Profile including levels of Magnesium, Vitamin D3, and Vitamin B12. It also measures Total Calcium, Phosphorus, Folic Acid (B9), Ferritin, Iron, TIBC, Transferrin Saturation, UIBC & Zinc. This profile also includes DHEAS (Dehydroepiandrosterone Sulfate) i.e. a hormone produced by the adrenal glands that serves as a precursor to male and female sex hormones. By evaluating these parameters, this panel assists in ruling out common causes and guiding appropriate treatment options.

- Thyroid profile with FT3, FT4, Ultra-sensitive TSH
- CBC with ESR
- Vitamins & Minerals Profile (Vitamin D3, Calcium, Phosphorous, Vitamin B12, Folic Acid, Iron, Ferritin, U.I.B.C., T.I.B.C., Transferrin saturation, Magnesium & Zinc)
- DHEAS (Dehydroepiandrosterone Sulfate)

INR 9,500

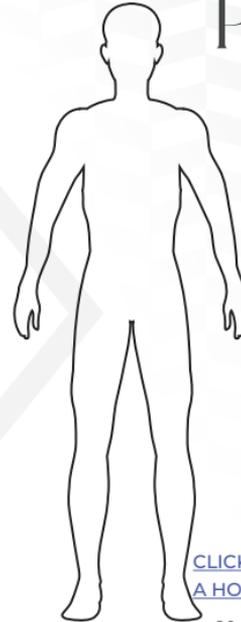

BASIC MALE HORMONAL PROFILE

Basic male hormonal profile measures the levels of hormones that play an active role in men's health and may be an important part of sexual health as well as general wellbeing in men. Cortisol also known as the stress hormone, and a Thyroid profile with FT3, FT4 & Ultra-sensitive TSH are included along with all other essential male hormones. This profile gives a broader picture of your health and is useful in determining the reasons behind general weakness, inability to lose weight, sexual dysfunctions, and various lifestyle related issues among males.

- FSH
- LH
- Cortisol
- DHEAS
- Estrogen (E2)
- Free Androgen Index
- SHBG
- Thyroid Profile with FT3, FT4, Ultra-Sensitive TSH
- Testosterone (Total)
- Testosterone (Free)
- Prolactin (Pooled)

Flu Panels

Respiratory infections can be caused not only by influenza viruses but also a host of other pathogens. These commonly spread through respiratory droplets & symptoms may include fever, congestion, cough, sore throat, fatigue, and body aches etc. Diagnosing accurately is essential to manage symptoms early, reduce complications, and prevent unnecessary use of antibiotics.

Dr. Dangs Lab offers advanced diagnostic options for upper respiratory infections through our Influenza Panel, Comprehensive Flu Panel, and Respiratory BioFire. These tests vary in coverage, identifying a wide range of pathogens, including influenza viruses and other respiratory agents. Using oropharyngeal and nasopharyngeal swabs, these tests provide precise results, helping physicians tailor treatment accordingly. Accurate testing ensures better patient care and supports public health by managing seasonal outbreaks effectively.

ULTRA COMPREHENSIVE HEALTH PROFILE

This is an all inclusive health check profile that provides detailed insights on the overall health status of a female. In addition to the Comprehensive Health Profile (CHP), Ultra CHP1 includes HOMA-IR; a test assessing insulin resistance, Vitamins A & E, serum protein electrophoresis, tests for evaluating levels of basic female hormones, a Copper & Zinc ratio & Cardiac assessment in the way of testing for high sensitivity Troponin T.

- CBC with ESR
- Blood Glucose Fasting*
- Blood Glucose PP**
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Lipoprotein [a]
- Homocysteine
- Apolipoprotein A
- Apolipoprotein B
- Vitamins & Minerals Profile (Vitamin D3, Vitamin B12, Folic Acid, Iron, Ferritin, U.I.B.C., T.I.B.C., Transferrin saturation, Zinc)
- Copper, Cu/Zn Ratio
- Thyroid profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)
- Comprehensive Urine Examination
- IgE
- hs CRP
- Microalbuminuria
- Amylase
- Lipase
- HOMA IR (Insulin Resistance Index)*
- hs Troponin T
- FSH
- LH
- Estrogen
- Cystatin C
- Vitamins A & E*
- Serum Protein electrophoresis

Indicative of extent of test coverage.

30

DR. DANG'S LAB

Note: - Tests marked with * require minimum 10-12 hours fasting.

Tests marked with ** are to be performed as PP (post prandial ie. 2 hours after finishing your meal)

ULTRA COMPREHENSIVE HEALTH PROFILE WITH PSA

This is an all inclusive health check profile that provides detailed insights on the overall health status of a male. In addition to the Comprehensive Health Profile (CHP) with PSA, ultra CHP with PSA includes HOMA-IR; a test assessing insulin resistance, Vitamins A & E, serum protein electrophoresis, tests for evaluating levels of basic hormones ie. testosterone free & total, a Copper & Zinc ratio & Cardiac assessment in the way of testing for high sensitivity Troponin T.

- CBC with ESR
- Blood Glucose Fasting*
- Blood Glucose PP**
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Lipoprotein [a]
- Homocysteine
- Apolipoprotein A
- Apolipoprotein B
- Vitamins & Minerals Profile (Vitamin D3, Vitamin B12, Folic Acid, Iron, Ferritin, U.I.B.C., T.I.B.C., Transferrin saturation, Zinc)
- Copper, Cu/Zn Ratio
- Thyroid profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)
- Comprehensive Urine Examination

Indicative of extent of test coverage.

31

COMMENTS

A) For tests marked with an asterisk (*) sample is to be collected after a 10-12 hour fast with a light vegetarian non fatty meal without alcohol the night before. Water is permissible during the fasting period.

B) Sterile container for urine sample if part of your package will be provided to you when the phlebotomist comes for your sample collection or can be collected a day prior from the lab/ purchased from a nearby pharmacy.

C) Please inform the phlebotomist regarding any allergies to topical alcohol and bandaid.

D) PP(post prandial) sample for blood sugar is to be drawn 2 hours post finishing your meal OR 2 hours post consuming glucose (as recommended by your physician).

E) Recommended frequency of packages for preventive health check purposes is yearly or as prescribed by your physician.

Functional Medicine Testing

Functional medicine testing transcends traditional symptom-based approaches, employing a comprehensive analysis of biochemical and metabolic markers. By delving deeper into the interconnectedness of bodily systems, including gut health, hormonal balance, and sleep patterns, these tests aim to identify the root cause of health concerns rather than simply treating symptoms. This holistic perspective allows healthcare practitioners to develop personalized interventions tailored to each individual's unique needs, leading to a more proactive and preventive approach to health optimization.

Functional medicine aims at curing the root-cause of diseases

DISEASES

- Arthritis
- Cancer
- Diabetes
- Obesity

- Heart disease
- Auto-immune diseases
- Fibromyalgia

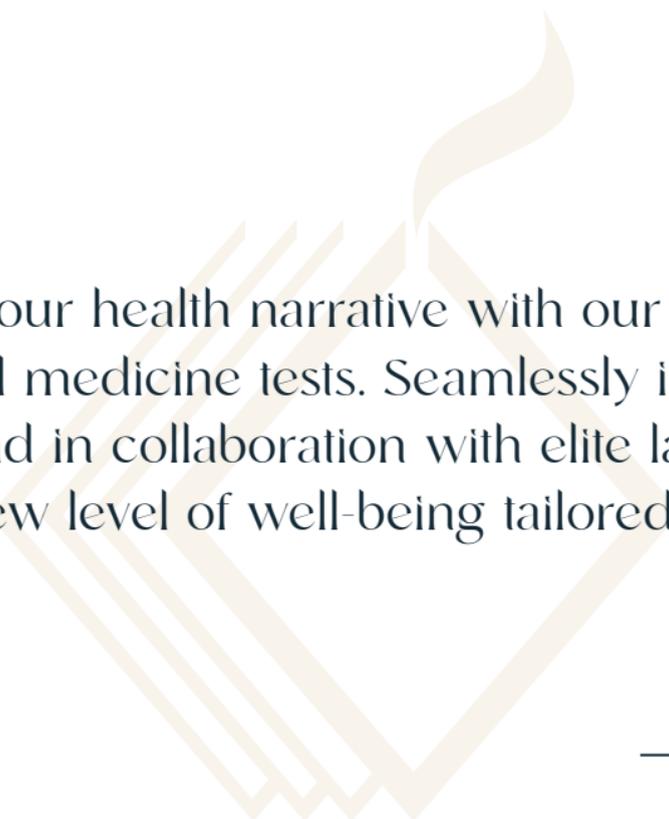

UNDERLYING CAUSES

- Inflammatory imbalances
- Hormonal imbalances
- Detoxification imbalances
- Structural imbalances
- Mitochondrial dysfunction

- Digestive
- Absorptive
- Microbiological imbalances
- Toxic emotions (anger, fear, resentment, etc.)
- Toxic chemical exposure

INDEX

1. Organic Acid Test (OAT Test)
2. GI Effects Comprehensive Profile (GIFx)
3. SIBO (Small Intestinal Bacterial Overgrowth)
4. EndoSelect (Salivary Hormone Test)
5. H. Pylori Breath Test
6. Heavy Metals (Blood, Hair, Stool and Urine)
7. IMU PRO (Food Intolerance/sensitivity tests)
8. Allergynius Dx (allergy-CRD testing)
9. GI Map
10. Adrenocortex Stress Hormone Profile
11. Essential & Metabolic Fatty Acids Analysis
12. Dutch (Dried Urine Test for Comprehensive Hormones)
13. Comprehensive Thyroid Profile
14. Zonulin
15. Intestinal Permeability Test
16. Gut Microbiome Test
17. Advanced Vitamins & Minerals Profile
18. NeuroSpot Test
19. METACHECK
20. Histamine Intolerance Test (DAO-Diamine oxidase)

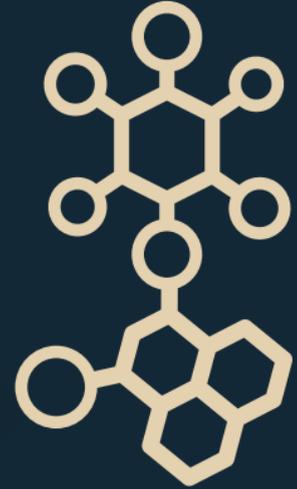

“Redefine your health narrative with our avant-garde functional medicine tests. Seamlessly integrated in-house and in collaboration with elite labs globally, discover a new level of well-being tailored just for you.”

DR. ARJUN DANG
(CEO, DR. DANGS LAB)

1. Organic Acid Test (OAT)

Organic acid analysis, a group of biochemical tests, elucidates metabolic function by quantifying specific organic acids in bodily fluids. These acids, byproducts of various metabolic processes, can exhibit elevated levels in various pathological states, including inborn errors of metabolism, mitochondrial dysfunction, and gastrointestinal dysbiosis. The Organic Acids Test (OAT) provides a comprehensive nutritional and metabolic snapshot of an individual's overall health. The OAT measures 76 organic acids from one easy-to-collect urine sample.

[Read More >](#)

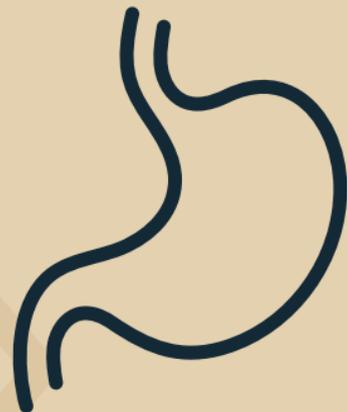

[Sample Report >](#)

2. GI Effects Comprehensive Profile (GIFx)

These advanced tests dive deep into digestion, inflammation, & the gut microbiome, revealing the root of your gastric woes. From gas & bloating to IBS & beyond, these tests give you actionable insights to prioritize treatment & optimize gut health. The GI Effects Stool Profiles are a suite of advanced stool tests that provide immediate, actionable clinical information for the management of gastrointestinal health. Utilizing cutting-edge technologies and biomarkers, these profiles offer valuable insight into digestive function, intestinal inflammation, and the intestinal microbiome. GIFx helps unlock a healthier you by opening the doors of personalized gut care.

[Read More ›](#)

[Sample Report ›](#)

3. SIBO (Small Intestinal Bacterial Overgrowth)

The SIBO is known as small intestinal bacterial overgrowth. Common symptoms are bloating/distension, gas, diarrhea, constipation, dyspepsia and irritable bowel syndrome (IBS). It can be related to Inflammatory bowel disease (IBD), diabetes, fibromyalgia, rosacea, Parkinson's disease, obesity etc. The SIBO Profiles are non-invasive breath tests which capture exhaled Hydrogen (H_2) and Methane (CH_4) gases following ingestion of a Lactulose solution to evaluate small intestinal bacterial overgrowth (SIBO) and intestinal methanogen overgrowth (IMO).

[Read More >](#)

[Sample Report >](#)

4. EndoSelect (Salivary Hormone Test)

EndoSelect is a test that allows clinicians to choose a combination of specific salivary endocrine biomarkers to assess a patient's hormone levels. This test is more convenient and accurate than the traditional blood tests, as it can be done at home and does not require fasting. EndoSelect can be used to diagnose a variety of hormone imbalances, including those that can cause symptoms such as fatigue, weight gain, mood swings etc.

[Read More ›](#)

[Sample Report ›](#)

5. H. Pylori Breath Test

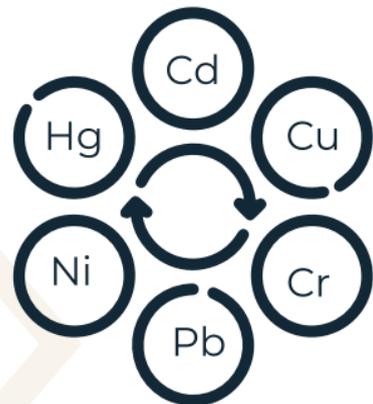

Helicobacter pylori (H. pylori), a common stomach bacterium, can cause peptic ulcers, gastritis, and a wide variety of gastric symptoms. Traditionally, uncomfortable endoscopies were used to detect it, but now, the H. pylori breath test offers a painless, accurate alternative. This simple test is fast and convenient. It's ideal for those with persistent stomach pain, bloating, heartburn, or other digestive issues, especially those at higher risk due to medication use, or other factors. Apart from this we also offer H.pylori antigen stool test and H.Pylori antibodies IgA & IgG blood tests.

[Read More >](#)

6. Heavy Metals (Blood, Hair, Stool and Urine)

Heavy metals can accumulate in the body, disrupt the balance of essential nutrients, and become toxic to organ systems. While certain elements are vital for proper body function, others such as mercury, lead, cadmium, aluminum, and arsenic are toxic to the human body and interfere with its functioning. These toxic metals have no known physiological functions and can cause harm to organ systems. This test offers various testing options, including urine, blood, stool, and hair samples, to evaluate the status of toxic metals and essential elements. This allows practitioners to select the most clinically appropriate option for their patients.

[Read More >](#)

7. ImuPro (Food Intolerance/sensitivity tests-IgG based)

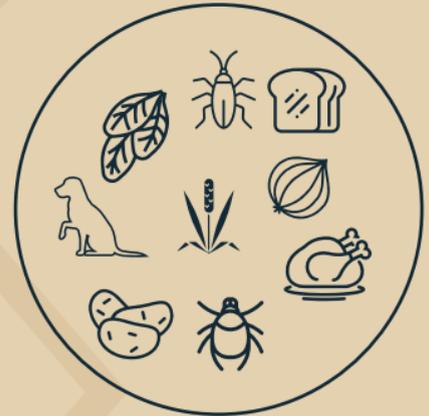

ImuPro is an IgG-based food intolerance test. This test meticulously examines IgG-linked food allergies, revealing specific proteins that might trigger an immune response. The Food Intolerance Test focuses on milk, wheat, yeast, fruits, vegetables and other common foods that can challenge digestion. This test, therefore, offers insights into potential discomforts. IgG Delayed Food Allergy Test delves even further, unveiling delayed immune reactions to foods. With ImuPro's tests, you can gain a holistic understanding of how your body interacts with different foods, enabling you to make informed dietary choices for improved well-being.

[Read More >](#)

8. Allergynius Dx (allergy-CRD testing-IgE based)

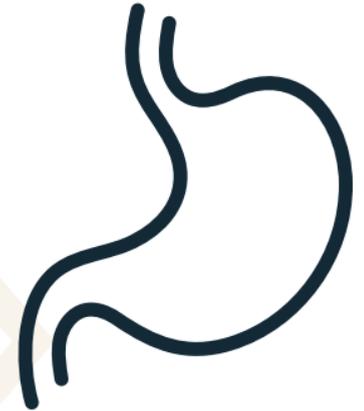

The Molecular Allergy Diagnostics test is based on Micro-array using nano Particle and provides results for 163 food and respiratory allergens along with 294 components. Allergynius Dx is a “game changer” for diagnosing allergies and predicting the probability of immunotherapeutic success. By combining the latest in component-resolved diagnostics that use nanotechnology, this test provides physicians and patients with a level of precision and personalization.

[Read More >](#)

9. GI Map

The GI-MAP stool test utilizes cutting-edge, Quantitative PCR technology to provide a true DNA/PCR-based stool test. This technology has high sensitivity and specificity. It uses stool testing to measure the amount of harmful and beneficial bacteria in the gut. It can also determine the different types and quantities of other microorganisms like fungi, viruses, and parasites. The GI-MAP's accuracy and reliability allow the practitioners to create personalized treatment protocols to address gut dysfunction.

[Read More >](#)

10. Adrenocortex Stress Hormone Profile

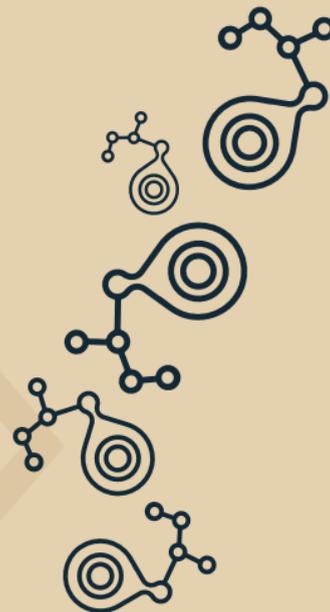

The Adrenocortex Stress Profile (ASP) provides an assessment of the Hypothalamic-Pituitary-Adrenal (HPA) axis using carefully timed salivary samples of the hormones, Cortisol and DHEA. Salivary testing is an easy, non-invasive option to measure unbound, biologically active parent hormone levels. It helps in detecting imbalances that can manifest in a wide range of clinical conditions, including hypertension, cardiovascular disease, gastrointestinal dysfunction, immune dysfunction, diabetes, metabolic syndrome, depression, chronic fatigue, insomnia, weight gain and persistent pain.

[Read More >](#)

11. Essential & Metabolic Fatty Acids Analysis

Fatty acid imbalances can be a causative factor in a variety of chronic health conditions. Essential and Metabolic Fatty Acids Analysis assesses the critical balance between essential Omega-6 and Omega-3 fatty acids. This Profile can indicate the need for fatty acid supplementation and/or dietary modification. Omega-3, omega-6 and trans fats all play a role in your health and are related to risk of heart disease. Tracking these fatty acids can help you optimize them for your health. The Omega-3 Index, Trans Fat Index, Omega-6/Omega-3 ratio and AA/EPA ratio all respond to what you eat. We recommend testing and re-testing annually to confirm if you are getting the right mix of fats in your diet.

[Sample Report >](#)

12. D.U.T.C.H. (Dried Urine Test for Comprehensive Hormones)

The D.U.T.C.H. test is a comprehensive hormone assessment using dried urine samples collected at key time points throughout the day. It measures various hormones, including estrogens, progestogens, androgens, glucocorticoids, free cortisol, free cortisone, and melatonin. The multiple samples provide a detailed analysis of hormonal patterns, making it useful for understanding complex hormone-related issues. The test reports are designed to be practitioner and patient-friendly, offering detailed explanations, comments, and a symptomatology chart based on the results.

[Read More >](#)

13. Comprehensive Thyroid Profile

This Comprehensive Thyroid Profile serves as a one-stop solution for thorough thyroid testing, adeptly diagnosing thyroid disorders. It meticulously assesses thyroid function through ultrasensitive TSH, free T4, free T3, thyroid antibodies (Anti Thyroid peroxidase & Anti Thyroglobulin) total T3, and total T4, offering a holistic view of both bound and unbound thyroid hormone levels. Crucially, it includes reverse T3, a pivotal yet often neglected indicator, which provides invaluable insights into metabolic balance and thyroid health, particularly in complex cases where standard tests fall short. This profile stands as an essential tool for a nuanced understanding enabling effective treatment of thyroid-related conditions by your physician.

[Sample Report >](#)

14. Zonulin

This test monitors the level of Zonulin. Elevated levels of Zonulin is identified to be the potential doorway to leaky gut syndrome, Crohn's, and other inflammatory, autoimmune and gastro-intestinal diseases. It is recommended to consult a healthcare professional for accurate interpretation and personalized treatment planning.

[Read More >](#)

15. Intestinal Permeability Test

Changes in intestinal permeability are associated with many health conditions including autism, autoimmune disorders, food sensitivities and inflammatory bowel disease. This 'leaky gut' causes disease because the perturbed intestinal barrier allows toxic molecules to enter the bloodstream. Intestinal permeability can be measured using the lactulose/mannitol test.

[Read More >](#)

16. Gut Microbiome Test

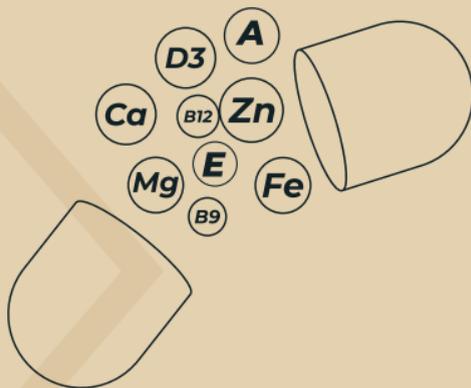

A gut microbiome test is a diagnostic tool used to analyze the composition and diversity of microorganisms present in the gastrointestinal tract, particularly in the colon. The gut microbiome consists of trillions of bacteria, viruses, fungi, and other microorganisms that play a crucial role in various aspects of human health, including digestion, metabolism, immune function, and even mental health.

[Read More >](#)

17. Advanced Vitamins & Minerals Profile

Vitamins and minerals play an essential role in strengthening the body's immune system. Deficiency of Vitamins and Minerals are amongst the commonest reasons for anemias, fatigue, muscle cramps, joint and body pains, tingling sensations, frequent infections and several other indistinct complaints. This test profile includes Vitamin D3, Vitamin B12, Total Calcium, Ionized Calcium, Phosphorus, Vitamin B9 (Folic Acid), Ferritin, T.I.B.C, Transferrin saturation, Magnesium, Zinc, Iron, U.I.B.C, Vitamin A, Vitamin E, STFR and RBC Folate.

[Sample Report >](#)

18. NeuroSpot Test

With just one urine and saliva test, the NeuroSpot tests allow you to identify the amount of stress your body is currently under. Your body is checked for the key stress hormones and the involved messenger chemicals. This test is frequently advised in cases of chronic fatigue. Ask your therapist which version of NeuroSpot Basic or NeuroSpot Plus is ideal for you. To determine chronic stress and burn-out in a targeted way, we have two analysis packages at our disposal :

NeuroSpot Basic : Serotonin, Dopamine, Noradrenaline, DHEA-S, Cortisol.

NeuroSpot Plus : All substances of NeuroSpot Basic + GABA and Glutamate.

[Read More >](#)

19. METACHECK

The CoGAP MetaCheck® is a genetic metabolic analysis that identifies the Meta-type and its effects in persons who are seeking help. By identifying the Meta-types, you may provide cutting-edge dietary and exercise guidance. By simply using a cheek swab sample, this advanced test delves deep into your genetic makeup, providing personalized nutrition guidance tailored uniquely to you. The CoGap Metacheck meticulously analyzes your genes to offer insights into how your body responds to over 800 different food types. This comprehensive analysis is not only invaluable for individuals looking to optimize their weight loss strategies but also for athletes striving to fine-tune their dietary plans for peak performance. Embrace a smarter, genetically-informed path to wellness with CoGap Metacheck – where your DNA holds the key to your optimal diet.

[Read More >](#)

20. Histamine Intolerance Test (DAO- Diamine oxidase)

Histamine intolerance testing, particularly the Diamine Oxidase (DAO) assay, is a sophisticated diagnostic tool designed to measure the activity of DAO, an enzyme pivotal in metabolizing histamine. A deficiency of DAO can lead to an accumulation of histamine, manifesting in a constellation of allergy-like symptoms. This test, often conducted through a blood sample, provides invaluable insights into the underlying causes of these symptoms, guiding targeted therapeutic interventions. The results from this assay can be instrumental in formulating a tailored dietary and lifestyle modification plan for individuals suffering from histamine intolerance.

Terms & Conditions

- The tests mentioned in this brochure are conducted either in-house or outsourced to an international lab partner. The final report will be available on the letterhead of the specific lab where the testing is executed.
- In the event of alarming or unexpected test outcomes, it is strongly advised to promptly contact the referring doctor for further consultation and necessary action.
- Laboratory results are intended to be assessed in conjunction with the patient's clinical history.
- Please carefully read and adhere to all prerequisites, including the cessation of other medications, to ensure result accuracy.
- The report will contain the name and age provided at the time of registration.
- A second sample may be requested for an indeterminate result or due to any other pre-analytical/analytical reasons.
- Reports will be shared via email or WhatsApp in PDF format to the registered mobile number or email provided.
- Test results are explicitly stated not to be valid for medico-legal purposes.
- The courts (forums) at Delhi shall have exclusive jurisdiction in all disputes/claims pertaining to the tests and/or results.
